

ArcTitan

Migrating to ArcTitan

Email Migration Services

Email migration is the process in which user inboxes and email messages are migrated from one email system to another. If you're looking to migrate email accounts and user mailboxes to the cloud, ArcTitan can support you with the move.

Many organisations are using ArcTitan's email archiving solutions as a migration tool to support them with mail server migrations. Whether this is an Exchange migration from the 2010 server to the newer 2013, 2016 or 19 servers. Others are completing email migration to Office 365 or Exchange Online from an on-premise mail server.

Types of Email Migration

Depending on the size of your business, there are different types of migration scenarios. Our experts can help you decide on the best migration for your business, and show you how ArcTitan can support you.

Cutover Migration

Where all email data is transferred over to the new provider, perfect for businesses with a small amount of users.

Staged Migration

If you have a huge amount of emails and attachments, data can be moved in migration batches to limit disruption.

Hybrid migration

For those businesses looking to have both a physical and virtual server.

Benefits of Migrating to the Cloud

Scalability

Cloud computing can scale up to support larger workloads and greater numbers of users far more easily than on-premises infrastructure, which requires companies to purchase and set up additional physical servers, networking equipment, or software licenses.

Cost

Companies that move to the cloud often vastly reduce the amount they spend on IT operations, since the cloud providers handle maintenance and upgrades. Instead of keeping things up and running, companies can focus more resources on their biggest business needs – developing new products or improving existing ones.

Performance

For some businesses, moving to the cloud can enable them to improve performance and the overall user experience for their customers. If their application or website is hosted in cloud data centers instead of in various on-premises servers, then data will not have to travel as far to reach the users, reducing latency.

Flexibility

Users, whether they're employees or customers, can access the cloud services and data they need from anywhere. This makes it easier for a business to expand into new territories, offer their services to international audiences, and let their employees work flexibly.

Why ArcTitan?

ArcTitan is a focused email archiving tool that can be tailored to match multiple business purposes and function. We capture and store every message received by an organisation on a separate, secure server. High security and audited access mean that information can't be altered.

With a complete focus on email archiving backed by unmatched expertise, ArcTitan is designed to meet compliance needs, improve productivity and enable users, with fast search & retrieval of information when it's needed most.
